

# Insurance you are glad to hold

Compulsory motor insurance that is easy to buy, easy to carry and easy to claim. AI assists every step; people make every decision.

## THE PROBLEM

# Still a piece of paper you can lose

### Buying

Bought only to comply. Cover is legal text nobody reads; renewal is easy to forget.

### Carrying

Paper gets lost or forgotten. A roadside check becomes an argument, not a scan.

### Claiming

Stressful and slow: calls, visits, missing photos, and no view of where the claim stands.

Compulsory cover is the same product at the same price from every insurer. **Nobody competes on experience, so nobody improves it.**

## OUR ANSWER

# One app for the driver, one system for the agency

### Buy

Cover explained in plain Vietnamese, from the policy's own numbers.

### Carry

A digital card with a QR code anyone can verify live.

### Claim

Guided claim with photos, AI triage for the adjuster, live status.

### Support

A 24/7 assistant that knows only the customer's own data.

**No discounts, cashback or price incentives, anywhere.** Every improvement is in the experience, as the brief requires.

CARRY

# Proof that cannot be lost

The policy is a card in the app: plate, validity, cover and a QR code.

Police or a garage scan it with any phone and see a **live** check: valid or not, plate masked, no personal data.

Reminders 30, 7 and 1 day before expiry, in plain words, with one tap to request the renewal.

BUY

## Cover in plain words

One tap and AI explains the policy in the customer's language: what is covered, what the limit and deductible mean, what to do after an accident.

Built only from the policy's own coverages. It invents no exclusions or rules; where the data is silent it says “ask the agency”.

A “Get insured” form on the agency website turns interest into a lead for staff. No automated pricing.

## CLAIM · 1 OF 3

# A claim in minutes, complete the first time

1. What happened: plain incident types
2. When and where, in the customer's words
3. Photo checklist: plate, whole car, damage, other vehicle
4. Review and consent, then submit

“Someone was hurt” first shows 115 and 113. Photos are resized on the phone for slow connections.

CLAIM · 2 OF 3

# AI triage for the adjuster

Before anyone opens the claim, a vision model has read the photos: damaged parts, severity, drivable or not, whether the plate matches the policy, and what evidence is missing.

It flags what a person must check, such as a vehicle model that doesn't match.

**Advice only.** The AI never approves, denies or prices a claim.

Claim 100003

✦ AI triage

Advice only: check it, the decision is yours.

: The insured Toyota Corolla Cross sustained minor damage to the rear bumper and tailgate consistent with a rear-end collision. However, photo 3 shows a different vehicle model badge (Zenix) and taillight damage inconsistent with the insured vehicle.

**Severity:** minor

**Drivable:** yes

**Plate in photos:** 51K-238.46 (yes)

**Photos:** rear bumper (minor), tailgate (minor)

**Photos vs. description:** Vehicle license plate and model in photos 1 and 2 match the policy details.; Rear damage on the insured vehicle matches the report of being hit from behind at a stop.; Photo 4 shows a silver sedan with front bumper abrasions consistent with the third-party vehicle description.; Photo 3 displays a different vehicle model badge ('ZENIX') and taillight damage not visible on the insured vehicle in photos 1 and 2.

**Suggested next step:** partner garage

**Check in person:** Photo 3 appears to show a different vehicle (Innova Zenix) instead of the insured Corolla Cross.; Third-party vehicle plate is blurred in photo 4.

**Please add if you can:** Ảnh chụp rõ biển số của xe sedan màu bạc đối phương.; Ảnh chụp lại góc cận cảnh hư hỏng thực tế của xe 51K-238.46 để làm rõ chi tiết trong ảnh 3.

Update

CLAIM · 3 OF 3

# Every step visible, no calls to ask

The customer follows the claim on a timeline: each status with what it means and what happens next.

An email on every change, in the customer's language.

The extra evidence the triage asked for is shown as a short request, never as a verdict.

## SUPPORT

# Answers at any hour, from her own data

The assistant runs as the customer, so it only sees her own policies and claims, plus the agency's knowledge base.

It never quotes prices and never predicts a claim decision.

A question it can't answer, a complaint or an emergency goes to a person, and the customer is told.

FOR THE AGENCY

# The same system behind it

Policies from several insurers, renewals due, claims, commissions and the accounting, in one open-source ERP.

Multi-tenant: one agency or insurer per tenant.

## RESPONSIBLE DESIGN

# Designed in, not bolted on

### Consent

Explicit consent to share claim photos and have them AI-checked. Built for Decree 13/2023; legal review in week 1.

### Minimal data

The QR page shows only proof of cover. The assistant sees only the asking customer's records.

### People decide

Staff review every claim decision and amount, AI flags, renewal requests and escalated questions.

### Honest messages

No incentives, no artificial urgency. Prompts forbid invented exclusions or rules.

### Auditable

Status changes are audit-logged; every AI call is logged with purpose and tokens, under a monthly allowance.

### Ready for peaks

Tết renewals, holiday and rainy-season claims: triage is queued, so peaks delay advice, never intake.

IMPACT

# What we expect to measure in the pilot

| Metric                     | Today (assumed)         | Pilot target            | Assumption                               |
|----------------------------|-------------------------|-------------------------|------------------------------------------|
| Time to report a claim     | Hours: call and visit   | Under 10 min            | Customer has a camera phone              |
| Complete at first submit   | Low                     | Over 70%                | Photo checklist and evidence prompts     |
| Time to first decision     | Days                    | Same day, simple damage | Adjusters read the triage first          |
| “Where is my claim?” calls | High                    | Half as many            | Timeline and status emails               |
| On-time renewals           | Unknown                 | +10 points              | Reminders, one-tap request, no incentive |
| Roadside proof disputes    | Paper lost or forgotten | None with the card      | Police scan the QR code                  |

These are hypotheses, not results. Week 1 of the pilot fixes how each is measured.

IMPLEMENTATION

# What we need from Tasco, and the fallback

| Need                          | Why                                       | Until it is there             |
|-------------------------------|-------------------------------------------|-------------------------------|
| Motor policy feed             | Cards, reminders, claims on real policies | CSV import                    |
| Claim status from insurer     | Live customer timeline                    | Staff update the status       |
| VETC plate data, with consent | Pre-filled vehicle, plate check           | Plate typed in                |
| Garage and roadside booking   | Act on the suggested next step            | Staff call the garage         |
| Zalo OA or SMS                | Reminders where customers read            | Email and in-app              |
| Policy wording, claim rules   | Assistant knowledge                       | Upload in the app             |
| LLM choice, data residency    | Compliance                                | Gemini, switchable per tenant |

## PILOT

# Four weeks to a scale, extend or stop decision

**Week 1 · 3–7 Nov**

### Scope lock

One segment, e.g. TNDS customers of one Tasco Auto dealer. NDA, consent texts, metrics and baselines.

**Week 2 · 10–14 Nov**

### Real context

Import the policy feed, brand the tenant, load knowledge, review the Vietnamese copy with staff.

**Week 3 · 17–21 Nov**

### Integrate

Claim status sync or staff workflow; Zalo or SMS if approved. Mid-point review.

**Week 4 · 24–28 Nov**

### Measure

Adjusters on live claims; measure completeness, decision time, calls and renewals.

**By 5 December:** a written decision to scale, extend or stop, with the numbers behind it.

# People decide. AI assists.

Easy to buy, carry and claim, with consent and minimal data by design,  
and not a single price incentive.

TRY IT TODAY

# A working prototype, not a mock-up
